WELCOME TO ACS SPRING 2007!

NanoTech-America, proud National Distributor for the innovative family of scanning probe microscopes from NT-MDT (Zelenograd, Russia), has a lot to celebrate this Spring. This Press Kit includes **Industry News** about:

1. The Braddock Group, NTA's new sales force in the West
2. The Wallace Group, NTA's new sales force in the Southwest
3. NTA's expansion across the border

And **Technology and Product News** about:

1. A new mini-movie on Smena NanoVue, a special desktop AFM built especially for university classrooms and nanotech centers.
2. Advances in AFM/Raman, available through NTMDT's Ntegra Spectra
3. Exciting new applications for NT-MDT's innovative Ntegra Tomo, a unique AFM/ultramicrotome hybrid that is opening new horizons for both ultrastructure studies and for 3D tomography (we know you can't print the movie on the attached disk, but we thought you would enjoy this dramatic new 3D view of the distribution of carbon nanotubes in epoxy).

Whether your beat is biotech or nanotech, materials or bio sciences, these press releases will have something of interest for your readership. Electronic versions of these press releases as well as images are on the enclosed disk and will also be available Wednesday, February 28th, on a special section of our website: www.nanotech-america.com/editorspage.

Need further information about who we are? Our backgrounder is immediately behind this Table of Contents.

To schedule an interview during the meeting, call me on my cell phone: (413)246-2841. I'll be on site in Booth #4092 Monday and Tuesday. The NTA staff will be available all week, with live instrumentation, working on the show floor. If you need anything further, please don't hesitate to contact me in the NTA offices: (972)954-8014

Don't know about Scanning Probe Technology? There are great explanations, complete with dynamic animations at www.nanotech-america.com

Best regards,

Managing Director,
NanoTech-America, Inc.
