### **What's YOUR AFM application?**

Thermal studies? High throughput analyses? Electrochemistry? 3D imaging of ultrastructure, from the bulk, at the nanoscale? NanoTech-America and NT-MDT have a solution for you.

### **Start with a simple NTegra. Add flexibility and capability.**

No need to buy a new controller or change software: our AFMs are engineered to grow as your lab grows. One controller, one microscope platform, one easy-to-use Windows-based software package.

### **From simple classroom models to the ultimate workstation**

Ask about our simple Smena NanoVue... a real research microscope, comfortably priced for the classroom and upgradable to our Solver Line. Or, for the most demanding lab, ask about NTegra Spectra: 5 imaging modalities (light microscopy, confocal, fluorescence, SNOM, and over 40 AFM techniques) seamlessly integrated to dual channel fluorescence and Raman spectroscopy, complete with TERS.

### **All backed by superb technical support & service...**

NanoTech America offers two fully equipped demonstration labs, each with a PhD microscopist to help you with your imaging challenges and service issues.

### **And One-Stop Shopping**

By the way... we also sell a full line of scanning probe tips, calibration standards, and test samples.
