## When you are serious about 3-D reconstructions from confocal images. . .

- When you are serious about having a choice of 3-D reconstructions -- look-through, surface or depth coded -- quick or fully calculated for rotation at any angle . . .
- When you are serious about doing REAL extended focus images -- to depths in excess of 1.7 mm, depending on sample . . .
- When you are serious about REAL stereo pairs and anaglyphs -- images for which YOU choose the construction angle . . .
- When you are serious about 3-D sophistication on easy-to-learn/easy-to-use software, written in the U.S. for the U.S. market . . .
- When you are serious about using just one convenient workstation for data acquisition, processing and display -- without exporting data and without the extra cost of auxiliary or peripheral equipment . . .
- When you are serious about the time involved in doing 3-D reconstruction and the money for leading edge 3-D technology . . .

## When you are REALLY serious about 3-D reconstructions from confocal images . . .
